TOOLS, EQUIPMENT AND MATERIALS

SUMMATIVE ASSESMENT

Module #	671101000-KM-02
NQF Level	level 4
Notional hours	80
Credit(s)	Cr 8
Occupation or Specialisation	671101000: Occupational Certificate: Electrician
Associated Occupation	671101: Electrician

Details	Please Complete this Section
Name	Sosa Inoetia Moshibudi
Contact Address	1141 Kgalfantein Face Foxfish street Ext2 1632
Telephone (H)	
Telephone (W)

Next steps for learning

Resources required for this assessment

Guidelines to the learner:

Learners Name: Sasa Inoetfia Moshibudi

Learner's signature: _____ Date: _____

Assessors Name: Baienaah Jabadi

Assessor's signature: _____ Date: _____

ASSESSMENT APPEALS PROCEDURE

1. A learner has the right to appeal under the following circumstances
   - If the laid down assessment procedures were not followed during assessments
   - If not all evidence available was taken into account during the assessment
   - The assessor was not a subject matter expert or did not have a subject matter expert during the assessment process
   - The assessor did not assess according to the performance criteria and range statement stipulated in the unit standard
   - Not all the range items were available for assessment

2. A learner bringing an appeal against a decision of the assessment will lodge such an appeal with the assessor and the internal moderator within 2 days of the assessment feedback session.

MT

Name of employee assessed: _____

Name of Assessor: _____

Date of feedback session: _____

Grounds for Appeal

No	Tick the applicable ground(s) for appeal	Tick
1	The assessment did not follow the laid down procedure	
2	Not all evidence available was taken into account during the assessment	
3	The assessor was not a subject matter expert nor was a subject matter expert present during the assessment process	
4	The assessment was not according to the performance criteria and the range statement stipulated in the unit standard	
5	Not all the range items were available for the assessment	

Reasons for Appeal

No	Please give detailed reasons for the choice(s) above

LEARNING UNIT 1:

KM-02-KT01: Hand tools and power tools (50%)

Learning Outcome 1:	KT0101 Types, uses and care of hand tools
Learning Outcome 2:	KT0102 Types, uses and care of portable power tools
Learning Outcome 3:	KT0103 Types, uses and care of fixed power tools

Task	Questions Description	Marks
1	Identify hand tools and describe their uses	10

1) Hammer
-> it is used to drive nails into surfaces or remove nails.

2) Wire Stripper
-> used to remove insulation from electrical wires without damaging the conductor.

3) Hacksaw
->It is used to cut metal pipes, rods or conduit.

4) Utility knife
-> It is used to cut insulation, cables, tape and other materials.

5) Diagonal cutters
-> it is used to cut electrical wires and small metal wires.

6) Long Nose pliers
-> it is used to hold small objects and bend wires, especially in tight spaces.

LEARNING UNIT 2:

KM-02-KT02: Measuring and testing instruments (50%)

Learning Outcome 1:	KT0201 Portable electrical measuring instruments
Learning Outcome 2:	KT0202 Types of electrical measuring and testing instruments
Learning Outcome 3:	KT0203 Safe use of measuring and testing instruments
Learning Outcome 4:	KT0204 Construction and operating principles of measuring and testing instruments
Learning Outcome 5:	KT0205 Methods of connecting measuring and testing instruments in circuits
Learning Outcome 6:	KT0206 Applications and methods of using electrical measuring and testing instruments
Learning Outcome 7:	KT0207 Care and maintenance of single and three phase measuring and testing instruments
Learning Outcome 8:	KT0208 Instrument transformers
Learning Outcome 9:	KT0209 Types and functions of panel mounted electrical measuring and testing instruments
Learning Outcome 10:	KT0210 Safe use of panel mounted measuring and test instruments
Learning Outcome 11:	KT0211 Protection of measuring instruments when connected in a circuit.

Task	Questions Description	Marks
2	a) Identify the basic components of various measuring and test instruments and describe the basic principle of operation. b) Describe the applications and methods of using electrical measuring and testing instruments in direct and alternating current circuits.	10

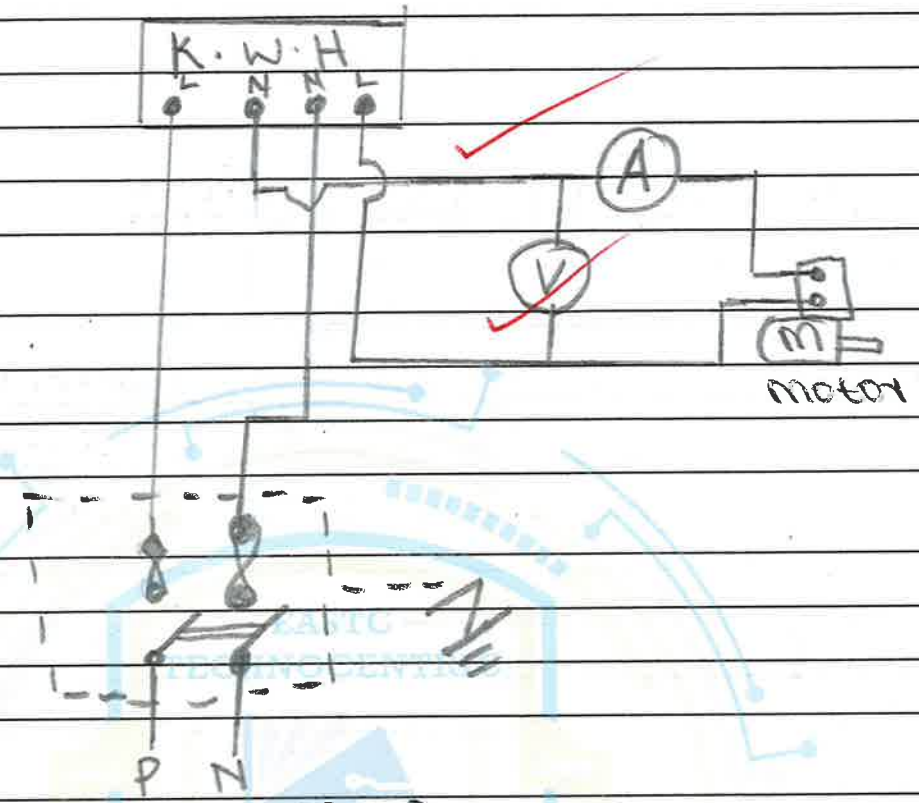

Task	Questions Description	Marks
3	Describe safety and functionality checks to be performed on measuring and testing instruments before use	5

1) Visual inspection
*Check the instrument for physical damage, such as cracked casing, loose parts or broken display they shouldn't be used
2) Check battery
*If the instrument uses battery make sure that battery is charged and functioning
3) Safety rating check
*Confirm that the instrument is rated for the voltage and current of the circuit being tested to avoid overloading the instrument.
4) Check test leads and probes
*Inspect the test leads and probes for damaged insulation, exposed wires or loose connections.
Faulty leads can cause electric shock or incorrect readings.
5) Proper Function Setting
*Make sure the instrument is set to the correct function such as voltage, current or resistance before testing.

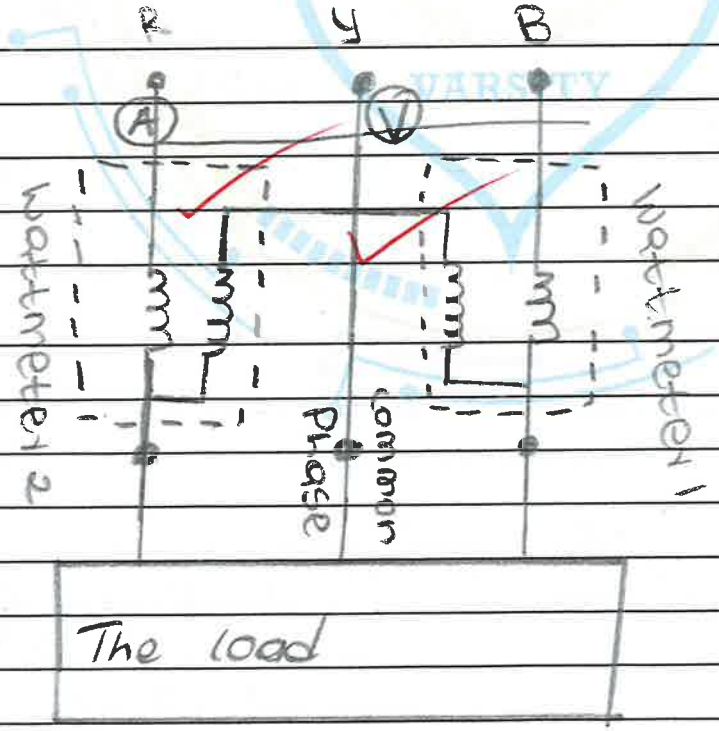

5

b) ~~Sigle~~ Single phase circuit

connection energy ammeter, voltmeter or kw.H meters

(2 Three phase circuit.

M.I

with the circuit.
* Voltmeter must be connected in parallel across the component. Correct connections prevent damage and incorrect readings.

7) Correct range Selection

* before connecting the instrument the correct measuring must be selected. Starting with the highest range helps prevent overloading and protect instrument from damage.

8) Use of potential transformers (PTs)

* potential transformers are used to reduce high voltages to a safe level of or for measurement.

9) Overload protection devices

* Some instruments include internal overload protection that prevents damage when the measured value exceeds the instrument's units.

10) Use of current transformers (CTs)

* Current transformers are used to reduce high currents to lower values so that the measuring instrument can safely measure them.

10
