- If not all evidence available was taken into account during the assessment
- The assessor was not a subject matter expert or did not have a subject matter expert during the assessment process
- The assessor did not assess according to the performance criteria and range statement stipulated in the unit standard
- Not all the range items were available for assessment

2. A learner bringing an appeal against a decision of the assessment will lodge such an appeal with the assessor and the internal moderator within 2 days of the assessment feedback session.

3. A learner bringing an appeal should complete the "Learner's Notice of Assessment Appeal "form before the Appeal Hearing. The form should be handed to the internal moderator or a representative of the SETA.

4. Should the internal moderator re-affirm the assessor' decision, the learner may appeal to the external verifier within 2 days after the initial moderator's feedback session. The external verifier's decision will be final. Should the external verifier re-affirm the assessors' decision, the cost for re-evaluation will be upon the learner. Should the verifier's decision differ from the assessor's decision, the cost for re-evaluation will be borne by the assessor.

Description!

* installed under floors
* hidden from view

10

Applications!

* offices, computer rooms
* commercial buildings
* used to distribute power and data cables neatly.

3) Cellular floor wireways

Description!

* Built into concrete floors
* contains multiple compartments

Applications!

* Large commercial buildings
* Used to separate power, data and communication cables

4) Metal wireways (steel trunking)

Description!

* made of steel or Aluminium
* strong and durable

Applications!

* Used where there is risk of damage to cables
* Areas where mechanical protection is required.
* Industrial installations (Factories, workshops)

Task	Questions Description	Marks
3	a) Describe the principles of operation of various control systems	5
	b) Describe the principles of operation of single and three phase circuit breakers and core balance earth leakage relays (wound primaries and straight primaries with tripping relay)	5

a) 1) Manual control system principle: it is controlled directly by a human operator.
2) Automatic control system principle: operates without human intervention using sensors and controllers.
3) Sequential control system principle: operation occur in a fixed step by step sequence.
b) 1) Single phase circuit breaker principle: it protects a single-phase circuit from overload and short circuit. operation:
* current flows through the breaker.
* if current exceeds the safe limit thermal mechanism bends due to heat → trips overload. Magnetic mechanism reacts instantly trips (short circuit)
* Circuit is automatically disconnected.

M.I

use: rural ~~areas~~ areas or where supply earth is ~~not~~ reliable

3) IT System

Principle:

* Supply is not directly earthed

use:

* Hospitals, mines and specials installation
* embarks ensure continuity of supply.

b) Principle:

* One main earth electrode is used to provide earthing for multiple circuits.

Design description (steps):

* install a main earth electrode is used to provide earthing for multiple circuits.
* ~~Design description~~
* connect it to a main earth bar (MEB)
* From MEB connect all protective conductors (earth wires) connect metal parts of equipment.
* ensure low resistance path to earth, bond all system to maintain equal potential.

c) 1) Underground cables

*

~~provision~~ purpose:

* protect against fault currents and insulation failure
* Ensure safe operation

provision:
